

# Iteration Plan Week 3

Our plan for the third iteration is simply to fix the remaining bugs and polish the product from Iteration 2. We choose to do this rather than implementing further use cases and functionality as we believe being able to produce a product which works and does everything it is supposed to well and without any bugs is more important than extra features. Therefore, we aim to complete the following changes to our system:

- Change preferences to allow for selection of multiple preferences at once rather than just pairs of students
- Update the user interface to allow for selection of multiple students
- Improve usability and make the user interface a lot more user friendly and intuitive.
- Fix remaining bugs in group creation.
